PRODUCT MANAGEMENT

Product manager and engineer with five years turning customer research and data into product decisions: a \$3.2M Gojek pricing launch, FlairX's enterprise AI infrastructure, and the insight that shifted Hevo Data's roadmap.

EDUCATION

University of Southern California, Marshall School of Business – Los Angeles, CA

May 2027

Master of Business Administration (STEM)

- Honors: Dean's Merit Scholarship
- Leadership: AVP Alumni Relations, South Asian Business Association; AVP External Relations, High Tech Association

Thapar Institute of Engineering and Technology – Patiala, India

August 2020

Bachelor of Engineering, Computer Engineering — GPA 3.73

- Honors: Merit Scholarship (2×); Published AI-based Fake News Detection research (Springer, 2020; 90+ citations)
- Leadership: General Secretary, Creative Computing Society – drove 1,000+ participants and secured \$30K in sponsorships

EXPERIENCE

FlairX AI (AI-first interview and hiring platform) – San Francisco, CA

Jun 2026 – Aug 2026

AI Product Manager Intern

- Unblocked \$1.2M of enterprise pilots after Genpact refused to outsource final-round interviews; reframed the policy objection as a workflow gap & led engineering and design to ship M365 panel scheduling with transcript-grounded AI scoring in 2 weeks.
- Rebuilt AI interview rendering onto swappable providers after a vendor's 20-minute cap ended hour-long enterprise rounds mid-call; replaced a monthly platform fee with usage-only pricing, cutting cost per minute 70%.

Gojek (SE Asia ride-hailing super app serving 20M+ riders) – Gurgaon, India

Jan 2025 – Jul 2025

Product Owner, Marketplace

- Separated price-sensitive abandonment from quote-latency drop-off using funnel analysis, elasticity modelling and 20+ rider interviews; launched a cost-tiered ride product which lifted conversion 9% and generated \$3.2M in incremental revenue.
- Owned Gojek's fleet integration platform and partner operating model from definition through launch; replaced bespoke builds with a standardized API and validation workflow, growing supply 18% and cutting pickup ETAs by 1.5 minutes across Singapore and Bali.
- Traded $\pm 4\%$ fare-quote accuracy for sub-second response by pre-caching pricing across 12 high-demand corridors, cutting quote latency 70% and recovering ~28K monthly rides lost to abandonment.

Hevo Data (Sequoia-backed ELT data platform) – Bengaluru, India

Nov 2023 – Jan 2025

Product Owner, Data Platform

- Drove Hevo 2.0's shift to a batch-first transactional model after Fortune 500 trials stalled on auditability, not feature depth; traded streaming speed for verifiable correctness and clear failure boundaries, improving stability 45% and onboarding 8 enterprise customers in 90 days.
- Reshaped Job Monitoring from a debugging afterthought into a first-class observability surface; reduced pipeline failure identification time 40% across 120K+ pipelines, making it the primary artifact enterprise evaluators relied on during trial-to-close.

Intuit (QuickBooks Online, MSE: Monetization Services & Experiences) – Bengaluru, India

Aug 2022 – Oct 2023

Software Engineer 2

- Diagnosed silent SMB cancellations as billing accuracy failures, not product gaps; designed reconciliation across three billing services serving 80K+ businesses and presented the financial impact to senior leadership, securing a roadmap pivot from feature velocity to auditability.
- Coordinated an 8-team incident response after lifecycle-state mismatches across billing services canceled subscriptions for 1,500+ businesses; ran fix-writing and validation in parallel rather than in sequence, cutting recovery from days to hours.

Optum (health-tech & data-analytics arm of UnitedHealth Group) – Gurgaon, India

Jul 2020 – Aug 2022

Software Engineer

- Unblocked a stalled provider integration by diagnosing a schema mismatch between legacy XML and Optum's REST APIs; designed a custom transformation layer that cut onboarding time from 6 months to 10 weeks.

SKILLS

- **Product Strategy:** Customer Discovery, Market & Competitive Research, Requirements Definition, Roadmaps, GTM
- **Data & Analytics:** SQL, Tableau, Excel, Data Visualization, Funnel Analysis, A/B Testing, Customer Interviews, KPI Design
- **Technical:** Python, APIs, Figma, Jira, Confluence
- **AI & Automation:** Mapped workflow bottlenecks across 2 L'Oréal units into 3 GenAI automation recommendations for executive review.
- **Startup Product:** Fluo — Secured a USC partnership after finding students trust peers over apps post-arrival; reset the roadmap around pre-arrival acquisition and long-term retention.
